#### Abstract

NOW A NEW CHAPTER APPEARS IN THE KALEIDOSCOPE HISTORY JOURNAL: AN ENCYCLOPEDIA ON THE HISTORY OF DENTISTRY. THE DETAILED ARTICLES CAN BE READ BELOW.

**Kulcsszavak:** enciklopédia, fogászattörténet, első források

**Keywords:** Encyclopedia, history of dentistry, history, first sources

The history of dentistry is traditionally written temporally, from ancient civilizations to current events. This encyclopedia attempts a different approach, a history of individual tools, instruments, materials, agents, interventions, specialties, providers or patients, concepts and trends, and anything related to dentistry and dental practice. Every one of the planned 500 entries will be relatively short, often not exceeding 300-1500 words, with one or more illustrations and a few key references—further readings. Whenever possible, the primary source material is provided for each stand-alone entry. At the bottom of each page, the reader will find related topics that can be accessed by typing “The history of...”. We are uploading to this website about 50 subjects each year as we complete them. We anticipate completing all entries in the next few years.

These entries have been carefully written and researched by the two editors. We tried to avoid referencing second-hand information to avoid the errors many review articles make, quoting other reviews instead of the primary source. If the reader finds our entries useful, please cite them:

*Encyclopedia of the History of Dentistry, Forrai J and Spielman AI, Editors.*
