Vol. 60 • 2013/11–12

## Summaries

---

DUDÁS, A.: **Terminology of drafts in scholarly publication** ..... 463

*Author's version, accepted draft, corrected proof, proof, version of record, peer-reviewed, double-blind reviewed, preprint, e-print* and similar concepts appear in the context of electronic publishing, including open access (OA) options and repository services. Terms are used widely, but not with a common interpretation across scholarly communication, research tenders, OA mandates of research bodies, journals' home pages and publishers' self-archiving policies. Versions of scholarly works form special types of documents, which may be regarded as grey literature. These include variations from rough drafts to the final, latest "online first view" proofs and successive drafts of corrected/enhanced published works. Increasingly they are made publicly available in repositories, often without metadata about the changes, the provenance and the status of the paper; hence the proliferation of different article versions generates problems in providing users (researchers) with authoritative information. This article presents the ongoing international and Hungarian context of the matter, collects, systematizes and makes clear the version types, terms and definitions of academic papers within publishing processes. Traditional and recently emerged nomenclature are detailed and compared. The results can be beneficial to identifying related concepts, expanding controlled vocabularies, building multilingual glossaries, designing ontologies as well as improving information systems and repositories by version handling.

KOÓS-TÖRÖK, E. – KISS-BOGNÁR, K.:  
**Domokos Kosáry – librarian, library director**

**and science organizer – was born 100 years ago** ..... 480

The Hungarian scientific community celebrates in 2013 the 100th anniversary of the birth of Domokos Kosáry. He was an academician, historian, winner of the Széchenyi Grand Prize. The prominent scientist was known to the wider public first of all as a university faculty member, a staff member of the Institute of History at the Hungarian Academy of Sciences with significant research achievements at the international level, and as an outstanding figure of public life. In the years of neglect, when he was less in the foreground for political reasons, he created in a short time a high-standard university library at the first Hungarian Agricultural University, which both carried out and supported research work. From 1951 he was responsible for university libraries at the National Library Centre; from 1952 he acted as librarian and library director of the Central Agricultural University Library, Gödöllő. In nearly 7 years, till his arrest in 1957, he set the professional foundations of the institution by organising acquisitions, bibliographical and scientific activities, as well as a wide-ranging exchange of publications, by building out external relations. It was him who launched the Review of Agricultural History and other series of library publications, and organised national professional events.

DÁVID, A. – TERNAI, Z.: **Scrutiny of Hungarian databases – E-bookshops 2.** ..... 494

In the series "Scrutiny of Hungarian databases", independent experts evaluate various Hungarian online content services from the point of view of their use by libraries.
